

4918 Broadband Antenna Coupler

Highlights

- Extended frequency range up to 6 GHz
- Precise results with further optimized RF match
- Excellent coupling values for all kind of devices
- High repeatability using sliders
- Usable for high transmission power
- Commonality in physical dimensions with the 4916 allows reuse of existing shuttles and RF Shields

Wide Frequency Range

The 4918 Broadband Antenna Coupler is an evolution of the 4900 Antenna Coupler Family featuring an increased frequency range.

Frequency range of the different Antenna Couplers:

4814 Antenna Coupler	350 - 495 MHz
4916 Antenna Coupler	700 - 2700 MHz
4918 Broadband Antenna Coupler	500 - 6000 MHz

The Broadband Antenna Coupler can cover additional frequency range on the lower end and on the upper end compared to the 4916. This makes the coupler an ideal choice for LTE, WiMAX and Wi-Fi (2.4 and 5 GHz) besides 2G and 3G.

Precise Measurements with High Accuracy

The deviation between different 4918 Antenna Couplers is kept very low. The frequency response is very flat over the entire frequency range. All these improvements allow very accurate measurements which are close to those usually only achievable with a direct connection.

Three Different Shuttles for High-Precision Measurements

It is essential for repeatable testing to position the device under test correctly and reliably on the Antenna Coupler. There are three different kinds of shuttles available from Aeroflex to allow repeatable positioning of all kind of devices. The standard shuttle has five snap-in positions, which are spaced 2 cm or 0.8 inch apart. This is close enough to find a suitable position for good coupling values, but also wide enough to avoid handling errors. The XY Shuttle brings the mobile phone even closer to the coupling antenna, further improving measurement accuracy and repeatability. The position of the mobile phone over the coupler can be adjusted in two dimensions (vertical and horizontal). Five snap-in positions in each dimension guarantee reproducible results if the same position is used for any type of devices. The PDA shuttle is similar to the standard shuttle and is designed to carry larger devices like 5 inch smart phones.

Shielding Avoids False Results and Protects Against Interference

Testing wireless devices requires transmitting and receiving RF signals at different frequencies and power levels. Without an appropriate shielding of the test environment from the outside world, interference is an obvious problem. These interference effects range from bad measurement results to dropped connections. Four different RF Shields are available from Aeroflex to enclose the 4918 Antenna Coupler, providing the necessary isolation for reliable testing and distorting other networks.

PRELIMINARY SPECIFICATIONS

FREQUENCY RANGE (CONTINUOUS)

Usable

500 to 6000 MHz

Optimized

750 to 3800 MHz

RF Match (optimized range)

VSWR

<2.3, typ. <1.9

Return Loss

<2.5 GHz <-8 dB

>2.5 GHz <-5 dB

Coupling Deviation

To Reference Unit

<0.7 dB

Between Two Units

<2 dB

Max. Power

Mobile Phone

+40 dBm

At 4918's QMA Connector

+28 dBm

RF Connector

On Board

QMA (Quick SMA)

RF cable N-Type or TNC

WEIGHT

Board

Approx. 700 g (1.5 lbs.)

Shuttle

Approx. 130 g (0.3 lbs.)

DIMENSIONS

Board

175 x 255 x 50 mm (6.89 x 10 x 1.9")

Standard Shuttle

160 x 120 x 55 mm (6.3 x 4.7 x 1.9")

XY Shuttle

218 x 125 x 33 mm (8.6 x 4.9 x 1.3")

PDA Shuttle

160 x 120 x 65 mm (6.3 x 4.7 x 2.5")

STANDARD DELIVERY

4918 Broadband Antenna Coupler

XY Shuttle

ORDERING INFORMATION

4918 Broadband Antenna Coupler AG 248 700

Shuttles, Coupling Kits:

Standard Shuttle AG 248 691

XY Shuttle AG 248 698

PDA Shuttle AG 248 692

Coupling Kit for 4931/4932 AG 248 467

Coupling Kit for 4933 AG 248 466

Cables, only needed if used without RF Shield:

RF Connecting Cable (1,5 m) N – QMA AG 382 844

RF Connecting Cable (1,5 m) TNC – QMA AG 382 843

RF Shield:

4921 RF Shield AG 248 346

4931 RF Shield AG 100 010

4932 RF Shield AG 100 020

4933 RF Shield AG 100 101
